

# DIY SCENTED CRAYONS

## WHAT YOU'LL NEED:

Silicon mold  
Crayons  
Cookie Sheet  
Oven  
Stirring rod or toothpicks  
Calming The Child

## WHAT YOU'LL DO:

Preheat the oven to 250 degrees. Remove any wrappers from crayons and break them into small pieces so they fit into your mold. Once the crayons are stripped, broken, and sorted into your mold, place the mold on your cookie sheet and stick it in the oven. Once melted, carefully remove from the oven and allow them to cool for a couple minutes, but not harden. Add a few drops of Calming the Child to each mold and stir well with stirring rod or toothpick. The number of drops you'll use depends on the size of your mold. We recommend aiming for a 2% dilution. Place in the freezer for about 20 minutes until hardened. Remove from the mold and enjoy!
